

# Environmental Policy Statement

Among the principles laid out in the S&C Electric Company Statement of Purpose and Guiding Principles is a determination that “all of S&C’s dealings will be bound by a rock-solid course of integrity” and a commitment to “maintain a strong and supportive relationship with our neighbors and the communities in which we work.” These guiding principles are brought to life every day in a variety of ways, from a refusal to tolerate unethical conduct in any aspect of our business to an expectation that all S&Cers will work in a manner that respects the safety and well-being of those around them.

One of the key manifestations of these guiding principles is a commitment to responsible corporate citizenship with regard to the environment. Toward that end, S&C Electric Company will:

- Abide by all accepted environmental practices, including meeting or exceeding applicable compliance obligations;
- Minimize waste and implement prevention of pollution strategies, while striving for protection of the environment and greater use of sustainable sources of energy and materials; and
- Continually improve environmental performance by setting, reviewing, and achieving environmental objectives and targets as applicable new knowledge and technology become available.

Anders Sjoelin, President & Chief Executive Officer
